                                                                                                                                                                              alcohol or drug intoxication, postinfection psychosis, postpartum psychosis, senile psychosis, traumatic psychosis and acute idiopathic psychosis illnesses. A new pharmaceutical composition is used for treating amyotrophic lateral sclerosis, anxiety, dementia, depression, epilepsy, Huntington's disease, migraine, demyelinating disease, multiple sclerosis, pain, Parkinson's disease, schizophrenia, psychoses, or stroke. Deficiency may be associated with diseases including cardiovascular disorders, cancer (e.g. neuroblastoma and colorectal carcinoma), osteoporosis, metabolism endocrine disease, inborn errors of metabolism, inflammation, immune disorders, neoplastic disease and renal disease. This sequence encodes human methylenetetrahydrofolate reductase (WTHFR) which maps to chromosome 1p36 (EC number 1.5.1.20), assertibed in the method of the inventions
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           anticonvulsant; cerebroprotective; amyotrophic lateral sclerosis; anxiety; dementia; depression; epilepsy; Huntington's disease; migraine; demyelinating disease; multiple sclerosis; pain; Parkinson's disease; psychosis; stroke; cardiovascular disorder; cancer; osteoporosis; metabolic disease; endocrine disease; inboarn error of metabolism; inflammation; immune disorder; human; inboarn error of metabolism; inflammation; immune disorder; human;
                                                                                                                                                                                                                                                                                                                                                                                           or a risk for or propensity to psychosis in a subject comprising determining the presence of a heterozygous methylenetetrahydrofolate reductase (MTHFR) mutant allele in a nucleic acid sample obtained from subject. The method is useful for diagnosing subjects at risk of, or suffering from a psychosis, particularly schizophrenia but includes manic-depressive disease, organic psychotic disorders, psychosis in

The invention describes a method of diagnosing a psychosis in a subject or a risk for or propensity to psychosis in a subject comprising determining the presence of a heterozygous methylenetetrahydrofolate reductase (MTHFR) mutant allele in a nucleic acid sample obtained from subject. The method is useful for diagnosing subjects at risk of or

alcohol or drug intoxication, postinfection psychosis, postpartum psychosis, senile psychosis, traumatic psychosis and acute idiopathic psychotic illnesses. A new pharmaceutical composition is used for treating amyotrophic lateral sclerosis, anxiety, dementia, depression, epilepsy, Huntington's disease, migraine, demyelinating disease, multiple sclerosis, pain, Parkinson's disease, schizophrenia, psychoses, or stroke. Deficiency may be associated with diseases including cardiovascular disorders, cancer (e.g. neuroblastoma and colorectal carcinoma), osteoporosis, metabolic or endocrine disease, inborn errors of metabolism, inflammation, immune disorders, neoplastic disease and renal disease. This sequence encodes a mutant human methylenetetrahydrofolate reductase (MTHFR, EC number 1.5.1.20), in which however the product of the incention of metabolism, inflammation, metabolism, and of the incention of metabolism, inflammation, inflammation, inflammation, inflammation, inflammation, inflammation, inflammation, inflammation, inflammation, inflammation, inflammation, inflammation, inflammation, inflammation, inflammation, inflammation, inflammation, inflammation, inflammation, inflammation, inflammation, inflammation, inflammation, inflammation, inflammation, inflammation, inflammation, inflammation, inflammation, inflammation, inflammation, inflammation, inflammation, inflammation, inflammation, inflammation, inflammation, inflammation, inflammation, inflammation, inflammation, inflammation, inflammation, inflammation, inflammation, inflammation, inflammation, inflammation, inflammation, inflammation, inflammation, inflammation, inflammation, inflammation, inflammation, inflammation, inflammation, inflammation, inflammation, inflammation, inflammation, inflammation, inflammation, inflammation, inflammation, inflammation, inflammation, inflammation, inflammation, inflammation, inflammation, inflammation, inflammation, inflammation, inflammation, inflammation, inflammation, inflammation, inflammation, inflammation, i
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           or a risk for or propensity to psychosis in a subject comprising determining the presence of a heterozygous methylenetetrahydrofolate reductase (MTHFR) mutant allele in a nucleic acid sample obtained from subject. The method is useful for diagnosing subjects at risk of, or suffering from a psychosis, particularly schizophrenia but includes manic-depressive disease, organic psychotic disorders, psychosis in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Diagnosing subjects at risk for or suffering from a psychosis, particularly schizophrenia comprises determining the presence o heterozygous methylenetetrahydrofolate reductase mutant allele subject

suffering from a psychosis, particularly schizophrenia but includes manic-depressive disease, organic psychotic disorders, psychosis in alcohol or drug intoxication, postinfection psychosis, postpartum psychosis, senile psychosis, traumatic psychosis and acute idiopathic psychotic illnesses. A new pharmaceutical composition is used for treating amyotrophic lateral sclerosis, anxiety, dementia, depression, epilepsy, Huntington's disease, migraine, demyelinating disease, multisclerosis, pain, Parkinson's disease, schizophrenia, psychoses, or stroke. Deficiency may be associated with diseases including The invention describes a method of diagnosing a psychosis in a subject, or a risk for or propensity to psychosis in a subject comprising determining the presence of a heterozygous methylenetetrahydrofolate reductase (MTHFR) mutant allele in a nucleic acid sample obtained from a subject. The method is useful for diagnosing subjects at risk of, or suffering from a maychosic particularly schizobers but includes methylenetetrahydrofolate reductase (MTHFR, EC number 1.5.1. nucleotide 559 has been altered to produce a mutant allele, of metabolism, inflammation, immune disorders, renal disease. This sequence encodes a mutant cardiovascular disorders, cancer (e.g. neuroblastoma and colorectal carcinoma), osteoporosis, metabolic or endocrine disease, inborn error for metabolism, inflammation, immune disorders, neoplastic disease arenal disease. This sequence encodes a mutant human described ĺn multiple

Database

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

T15423
hypothetical protein C06A8.1 - Caenorhabditis elegans
C;Species: Caenorhabditis elegans
C;Date: 20-Sep-1999 #sequence_revision 20-Sep-1999 #t.
C;Accession: T15423
R;Leimbach, D.
submitted to the EMBL Data Library, November 1995
n.Description: The sequence of C. elegans cosmid C06?
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 A:Molecule type: protein

The clone was isolated from a sfl1 cDNA library which was prepared using soybean immature flowers. MTHRR (E.C. 17.99.5) plays a role in the synthesis of methionine. The coding sequence of the enzyme is used in the construction of a chimeric gene to alter the level of tetrahydrofolate metabolism enzymes in plants. The enzyme may provide target to facilitate design and/or identification of inhibitors that means the property of the construction of a chimeric gene to alter the level of the construction of a chimeric gene to alter the level of the construction of a chimeric gene to alter the level of the construction of a chimeric gene to alter the level of the construction of a chimeric gene to alter the construction of a chimeric gene to alter the construction of a chimeric gene to alter the construction of a chimeric gene to alter the level of the construction of a chimeric gene to alter the construction of a chimeric gene to alter the construction of a chimeric gene to alter the construction of a chimeric gene to alter the level of the construction of a chimeric gene to alter the construction of a chimeric gene to alter the construction of a chimeric gene to alter the construction of a chimeric gene to alter the level of the construction of a chimeric gene to alter the construction of a chimeric gene to alter the construction of a chimeric gene to alter the construction of a chimeric gene to alter the construction of a chimeric gene to alter the construction of a chimeric gene to alter the construction of a chimeric gene to alter the construction of a chimeric gene to alter the construction of a chimeric gene to alter the construction of a chimeric gene to alter the construction of a chimeric gene to a chimeric gene to a chimeric gene to a chimeric gene to a chimeric gene to a chimeric gene to a chimeric gene to a chimeric gene to a chimeric gene to a chimeric gene to a chimeric gene to a chimeric ge
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Falco

                                                                                                                                                                                                                                              This is the protein sequence encoding human MTHFR, the gene of which has been localised to chromosome 1p36.3. Deficiencies of this protein may lead to cardiovascular and neurological disorders and disorders influences by folic acid metabolism.
                                                                                                                                                                                                                                                                                                                                                                                                                                           Human methylene:tetra:hydro:folate reductase cDNA probe - for detection of sequence abnormalities in methylene:tetra:hydro:folate reductase e.g. in cardiovascular, neurological or folic acid

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human; methylenetetrahydrofolate reductase; MTHFR; gene therapy; glioma; antisense therapy; EC 1.5.1.20; chromosome 1p36.3; cancer; kidney cell; panczęas; lung; brain; cytostatic; colon carcinoma; breast; colorectal;
                                                           5-methylenetetrahydrofolate, a co-substrate for methylation of homocysteine to methionine. The invention provides potential therapy for individuals with MTHFR deficiency. The non allele-specific antisense nucleic acids are useful for treating, stabilising or preventing cancer,
                                                                                                                                                                                                  The invention relates to a non allele-specific antisense nucleic acids, which binds to methylenetetrahydrofolate reductase (MTHFR; EC 1.5.1.20) which binds to methylenetetrahydrofolate reductase (MTHFR; EC 1.5.1.20) nucleic acids and inhibits MTHFR protein expression in a mammal. MTHFR catalyses the NADPH-linked reduction of 5,10-methylenetetrahydrofolate to
                                                                                                                                                                                                                                                                                                                                                                                                                                                               New antisense nucleic acids, which are methylenetetrahydrofolate reductase inhibitors, useful for treating, stabilizing or preventing cancer, e.g. breast carcinoma, colon carcinoma, colorectal carcinoma
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 US2001025030-A1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  neuroblastoma;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human methylenetetrahydrofolate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                03-JAN-2002

SUBUNIT: HOMODIMER (BY SIMILARITY).

SIMILARITY: BELONGS TO THE METHYLENETETRAHYDROFOLATE REDUCTASE (EC 1.5.1.20/EC 1.7.99.5) FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                m. Genome 9:652-656(1998).

FUNCTION: CATALYZES THE CONVERSION OF 5,10-
METHYLENETETRAHYDROFOLATE, A METHYLENETETRAHYDROFOLATE, A SUBSTRATE FOR HOMOCYSTEINE REMETHYLATION TO METHIONINE.

CATALYTIC ACTIVITY: 5-methyltetrahydrofolate + NADP(+) = methylenetetrahydrofolate + NADPH.

COFACTOR: FAD (BY SIMILARITY).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       MGI:106639;

1 CATALYTIC ACTIVITY: 5-methyltetrahydrofolate + acceptor = 5,10-
methyl-neneteriahydrofolate + reduced acceptor.

1 COFACTOR: FAD (BY SIMILARITY).

1 PATHWAY: Methionine biosynthesis.

1 SIMILARITY: BELONGS TO THE METHYLENETETRAHYDROFOLATE REDUCTASE
(EC 1.5.1.20/EC 1.7.99.5) FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            SEQUENCE FROM N.A.
